Tech Systems, Inc. Achieves UL Certification

Commitment to service and performance leads Tech Systems to pursue and achieve UL certification.

Buford GA, May 10, 2018: Tech Systems, Inc. today announced its achievement of UL UUFX Certification.

Tech Systems' F.O.C.U.S.® Fusion Center has been providing 24/7 support for clients for several years. From centralized dispatch of service technicians, to remote diagnostics, to monitoring of access control and video surveillance systems. These services coincide with Tech Systems' ISO-9001 Certified Quality Management System and ISO-27001 Information Security Management System, however, with UL being the industry standard for monitoring centers Tech Systems chose to pursue this highly-recognized and reputable certification.

"The UL UUFX standard provides guidelines and requirements around the facility, staffing, technology and processes/procedures for monitoring centers," said Jerry Cordasco, CPP, PSP. "When we built the Fusion Center in our new location in Buford, GA we did so according to UL specifications, but achieving the certification now demonstrates our competency and commitment in the world of monitoring."

Tech Systems is a service-centric security integration company dedicated to providing clients with the latest solutions in both technology and services.

"Enterprise clients looking to augment their current staff and clients looking to enhance their existing security program have been requesting services like access control alarm monitoring, video verification, all the way to remote guarding services," Cordasco said. "While we have had the framework in place and have been providing these services to clients for some time, obtaining the UL listing helped us ensure our facility and systems are designed and managed to provide highly-reliable and effective monitoring solutions."

UL UUFX certifies monitoring centers based on the facility's design and hardening, staffing, systems and demonstrated competency to receive and process alarms effectively.

"As we commit to monitoring our clients' security systems, it is essential that we are as prepared as possible," said Wayne Smith, CISSP, CISM, CPP. "Our priority is to deliver services to our clients that not only meet, but exceed our clients' expectations. Monitoring is no exception. UL certification offered us the opportunity to demonstrate our capabilities in the area of monitoring and the inspections we will be subject to in the future will help ensure our methods are in line with UL's stringent requirements."

Tech Systems specializes in the design, installation, service and monitoring of access control, video surveillance and peripheral security systems. Its clients include many Fortune 500 companies and enterprise clients that depend on Tech Systems to
